● INVESTIGATING

INC-2026-0512-01

Elevated 5xx on the reports API

Reports API is returning intermittent 502s from one of our regions. Dashboard and library are unaffected. Investigating.

request_id: req_7Hk29Lm3 - region: iad-1 - 09:42:14 UTC

PLANNED MAINTENANCE • SUNDAY 02:00-04:00 UTC

We're tuning the indexer. Back in *~24 minutes*.

Migrating to a faster postgres + pgvector cluster so search drops below 200ms again. The API, dashboard, and digest delivery are paused. Webhooks will replay any missed events from your saved queue.

Migration progress

62% • ETA 02:24 UTC

- 02:00 Stage 1 - snapshot live cluster
- 02:08 Stage 2 - rebuild pgvector indexes (2.4M rows)
- 02:14 Stage 3 - promote replica • 62% replayed
- - Stage 4 - switch DNS, replay webhook queue
- - Stage 5 - verify • resume scheduled jobs

```
